Professional Summary

Computer Science Engineering student specializing in AI/ML integration and full-stack development. Proven track record of architecting award-winning, AI-native hackathon projects and currently contributing to scalable e-commerce solutions as a Software Engineer Intern. Founder and Lead of SVIT's LEGION Club, demonstrating strong cross-functional team management and technical leadership.

Technical Skills

Languages: Python, C, HTML, CSS

Frameworks & Tools: React, FastAPI, Streamlit, ChromaDB, Git, Anigravity, Cursor AI, Firebase

Experience

YugaYatra Retail OPC Pvt. Ltd. – Software Engineer Intern Mar 2026 – Present

- Developing scalable web applications utilizing Cursor AI, Firebase Studio, and integrated AI technologies.
- Contributing to live freelance projects and assisting in e-commerce deployments and seller portal management.

LEGION Club (SVIT) – Founder & Non-Technical Lead Feb 2026 – Present

- Founded and structured the CSE Department club into Technical and Non-Technical divisions to serve the broader student body.
- Directed the Non-Technical division, orchestrating multiple department-wide events and managing all logistical operations.

Projects

SENTRY – Novus'24 National Hackathon github.com/BitlaUmesh/SENTRY

- Developed an AI-Native, ChatOps-first Security Orchestration platform using Python to mitigate alert fatigue in SOCs.
- Architected a FastAPI backend integrated with Llama 3.1 (via Groq) for zero-shot threat mapping to the MITRE ATT&CK framework.
- Implemented a Human-in-the-Loop containment system utilizing the Telegram Bot API to enforce authorization protocols.

Neural-Sync – 4th Place, HackForge 48-Hour National Hackathon github.com/BitlaUmesh/Neural_Sync

- Built a Python framework to synchronize neural network outputs with high-frequency data streams.
- Optimized Git-versioned data pipelines to significantly reduce processing latency for real-time AI inference.
- Secured 4th Place overall and a Software Engineering Internship by developing and presenting this framework.

Shopping Agent – GDG Hyderabad Agent-A-Thon github.com/BitlaUmesh/Shopping-Agent

- Built an AI-powered price-comparison engine using Streamlit and Python to aggregate e-commerce data via Google APIs.
- Integrated ChromaDB and Sentence Transformers for semantic search and highly accurate cross-site product matching.

EcoScan AI – Data Dynamo 2.0 National Hackathon github.com/BitlaUmesh/EcoScan-AI

- Engineered a computer vision-based AI agent using Python to classify waste via real-time camera feeds.
- Developed a responsive front-end with HTML5 and CSS3 to deliver step-by-step recycling instructions.

Education

Swami Vivekananda Institute of Technology, B.Tech in Computer Science Sept 2023 – May 2027

- **GPA:** 7.7/10.0
- **Relevant Coursework:** Data Structures, Computer Networking, DevOps, Database Management Systems.
